Device profile	Device Profil for Encoders V 1.0
Operating modes	<ul style="list-style-type: none"> <li>■ I/O-Polling</li> <li>■ Cyclic</li> <li>■ Change of State</li> </ul>
Preset value	The „Preset“ parameter can be used to set the encoder to a predefined value that corresponds to a specific axis position of the system. The offset of encoder zero point and mechanical zero point is stored in the encoder.
Parameter functions	<p>Rotating direction: The relationship between the rotating direction and rising or falling output code values can be set in the operating parameter.</p> <p>Scaling: The parameter values set the number of steps per turn and the overall resolution.</p>
Diagnostic	<p>The encoder supports the following error warnings:</p> <ul style="list-style-type: none"> <li>■ Position and parameter error</li> </ul>
Factory setting	User address 00
